Restaurant Dataset Analysis Report

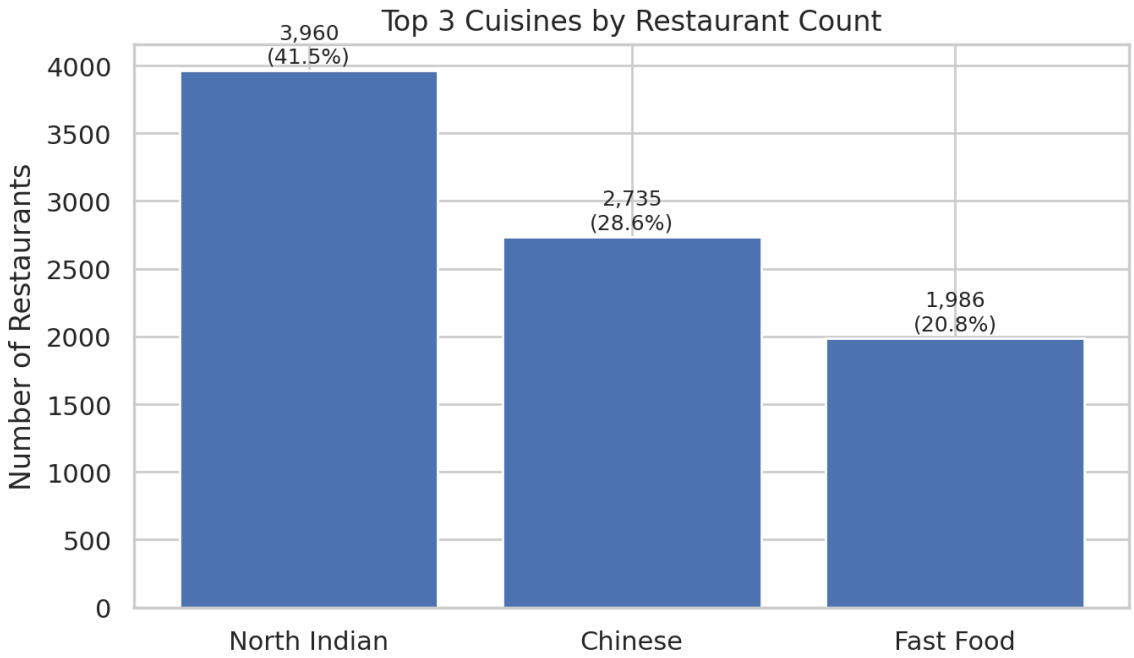
Prepared from the provided restaurant dataset. The report covers cuisine trends, city-level performance, price distribution, delivery behavior, ratings, cuisine combinations, geographic spread, and restaurant chains.

Metric	Result
Dataset size	9,551 restaurants
Cities covered	141
Most represented city	New Delhi (5,473 restaurants)
Online delivery availability	25.66% of restaurants
Average votes per restaurant	156.91

Note: For the city average rating task, the report shows both the raw highest average and a comparison view using cities with at least 20 restaurants, so single-location outliers do not distort the picture.

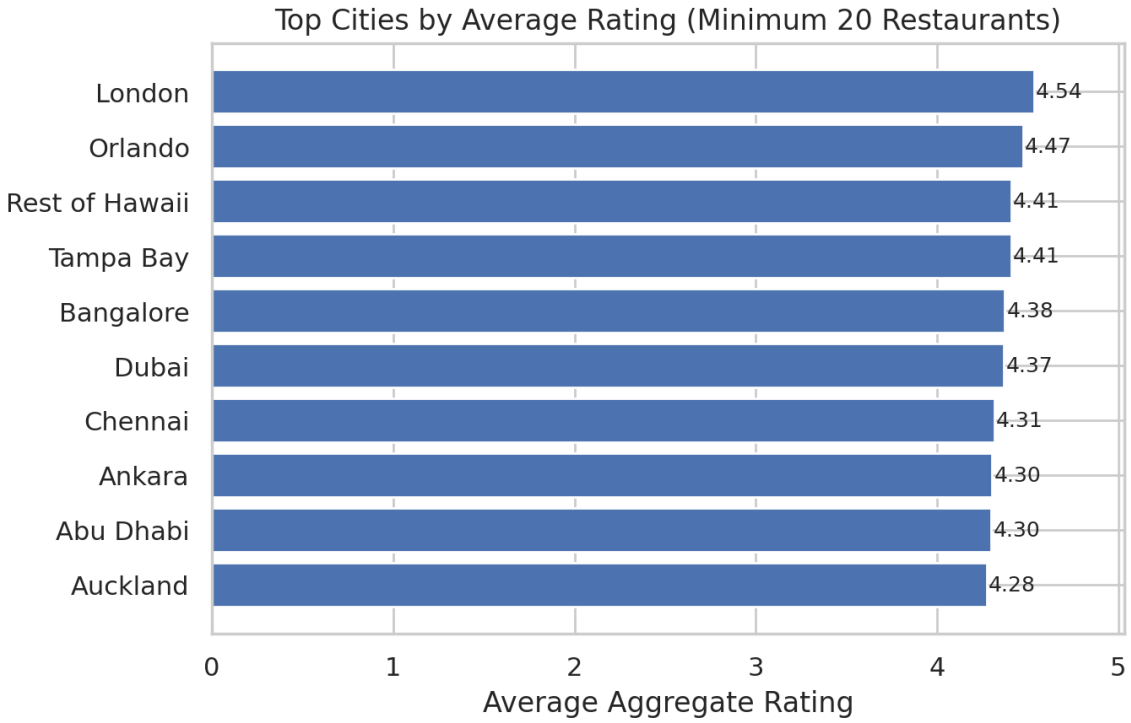
Tasks 1 and 2: Top Cuisines and City Analysis

The three most common cuisines in the dataset are **North Indian**, **Chinese**, and **Fast Food**. They appear in 3,960, 2,735, and 1,986 restaurants respectively. In percentage terms, these cuisines are served by 41.46%, 28.61%, and 20.79% of restaurants.



Cuisine	Restaurant count	Share of restaurants
North Indian	3,960	41.46%
Chinese	2,735	28.61%
Fast Food	1,986	20.79%

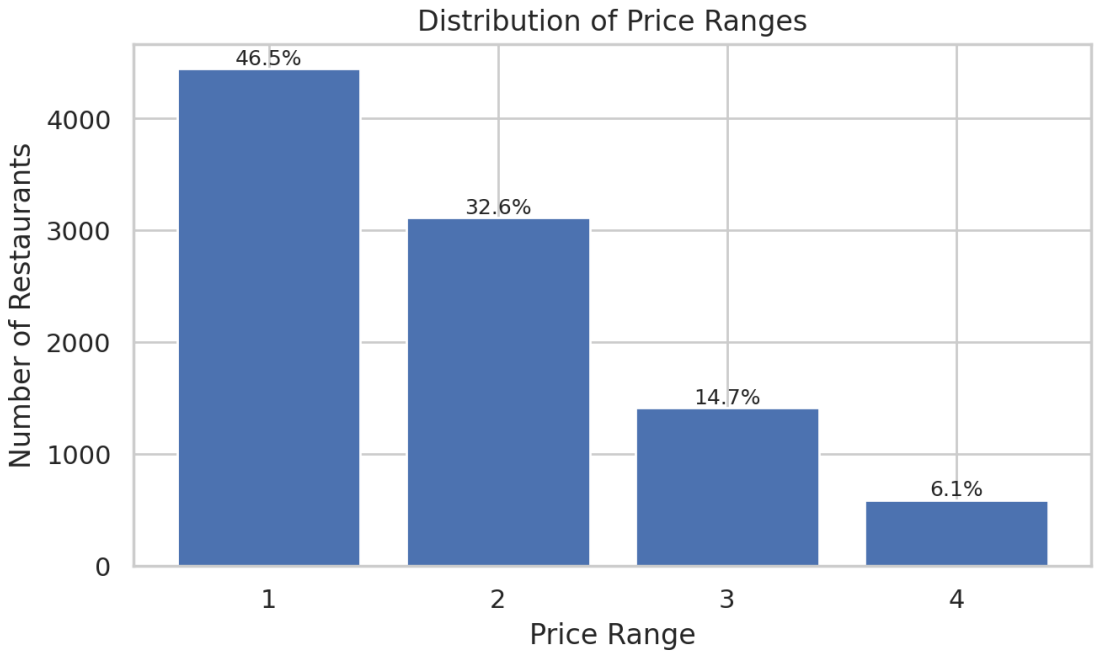
At the city level, **New Delhi** has the highest number of restaurants in the dataset with **5,473** entries. The raw highest average aggregate rating belongs to **Inner City** at **4.90**, but that city has only **2** restaurants in the dataset. When considering cities with at least 20 restaurants, **London** has the highest average rating at **4.54**.



City	Restaurant count	Average rating
London	20	4.54
Orlando	20	4.47
Tampa Bay	20	4.41
Rest of Hawaii	20	4.41
Bangalore	20	4.38
Dubai	20	4.37
Chennai	20	4.31
Ankara	20	4.30

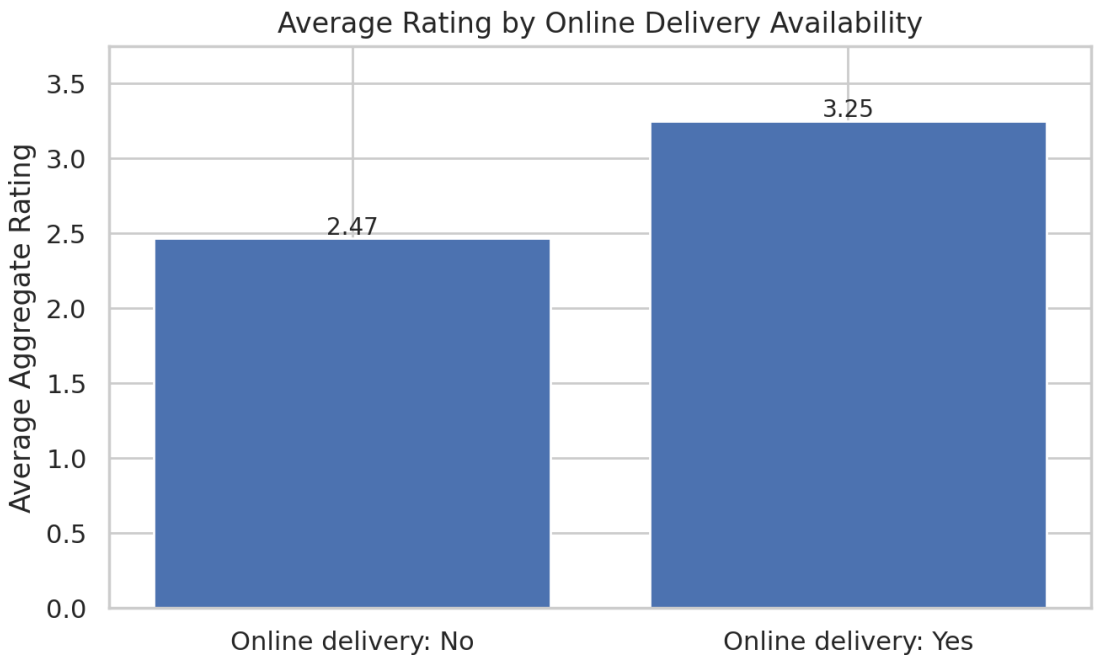
Tasks 3 and 4: Price Range Distribution and Online Delivery

Price range values are concentrated toward the lower and mid categories. The chart below shows the distribution across all four price bands, followed by the percentage share of each category.



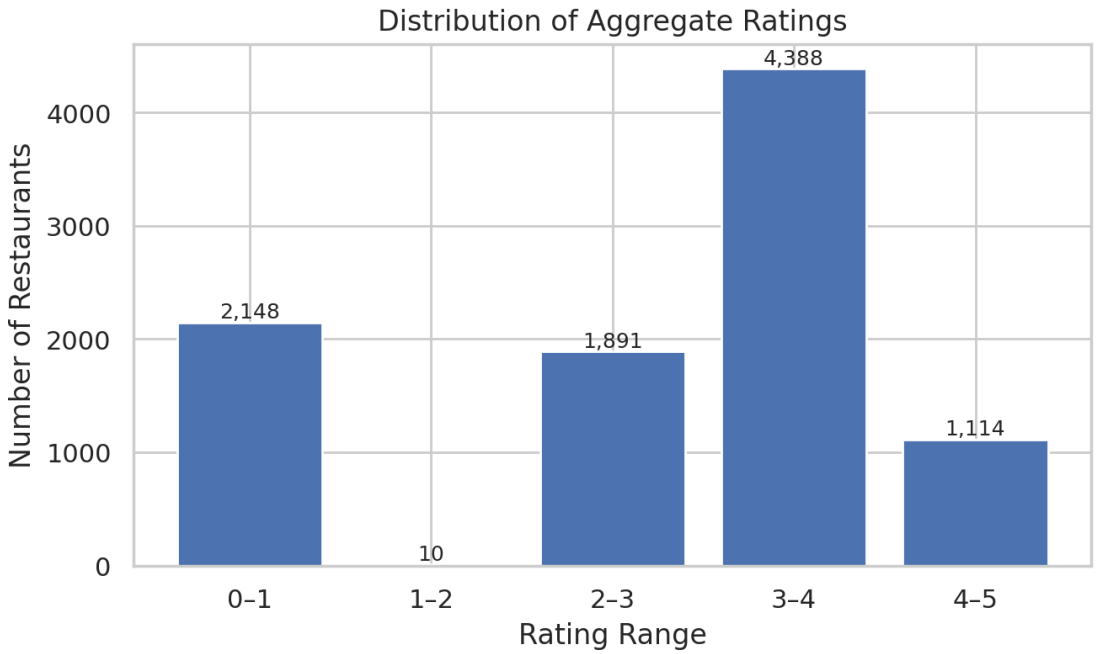
Price range	Restaurant count	Percentage
1	4,444	46.53%
2	3,113	32.59%
3	1,408	14.74%
4	586	6.14%

Online delivery is available for **25.66%** of restaurants in the dataset. Restaurants with online delivery have an average rating of **3.25**, while restaurants without online delivery have an average rating of **2.47**. This indicates a positive difference in ratings for restaurants that offer online delivery.



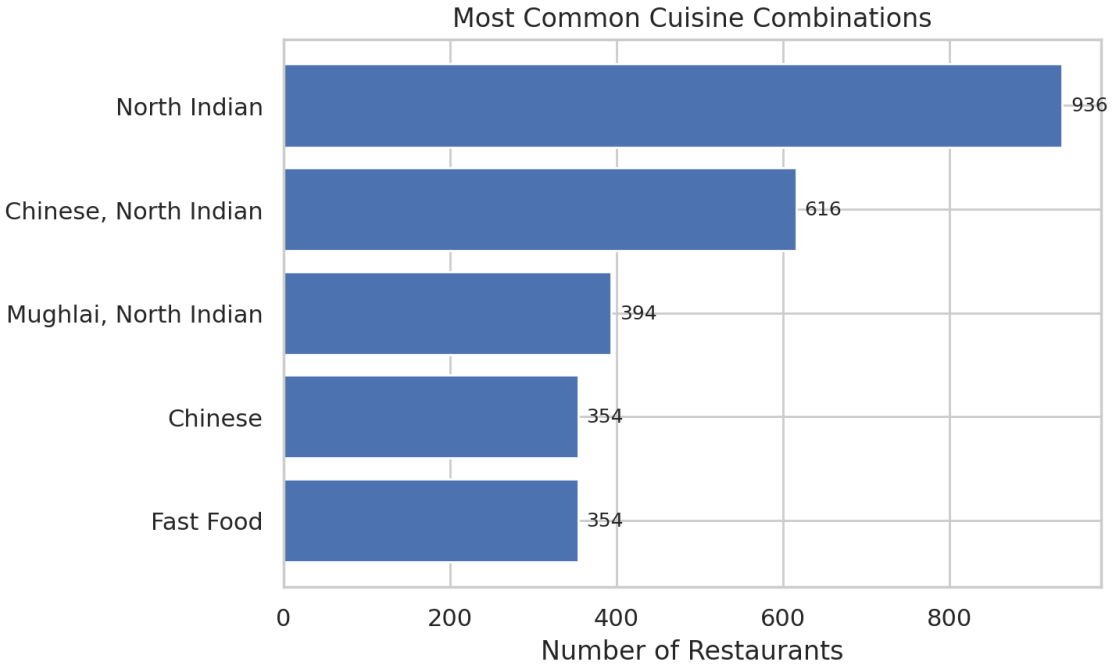
Tasks 5 and 6: Restaurant Ratings and Cuisine Combinations

The distribution of aggregate ratings is centered in the mid-to-high range. The most common rating band is **3–4**. Across the dataset, restaurants receive an average of **156.91** votes.



Rating range	Restaurant count
0–1	2,148
1–2	10
2–3	1,891
3–4	4,388
4–5	1,114

Cuisine combinations were analyzed by treating the full cuisine list for each restaurant as one combination. The most frequent combinations are shown below. A second table highlights combinations that have comparatively high average ratings, restricted to combinations appearing in at least five restaurants.

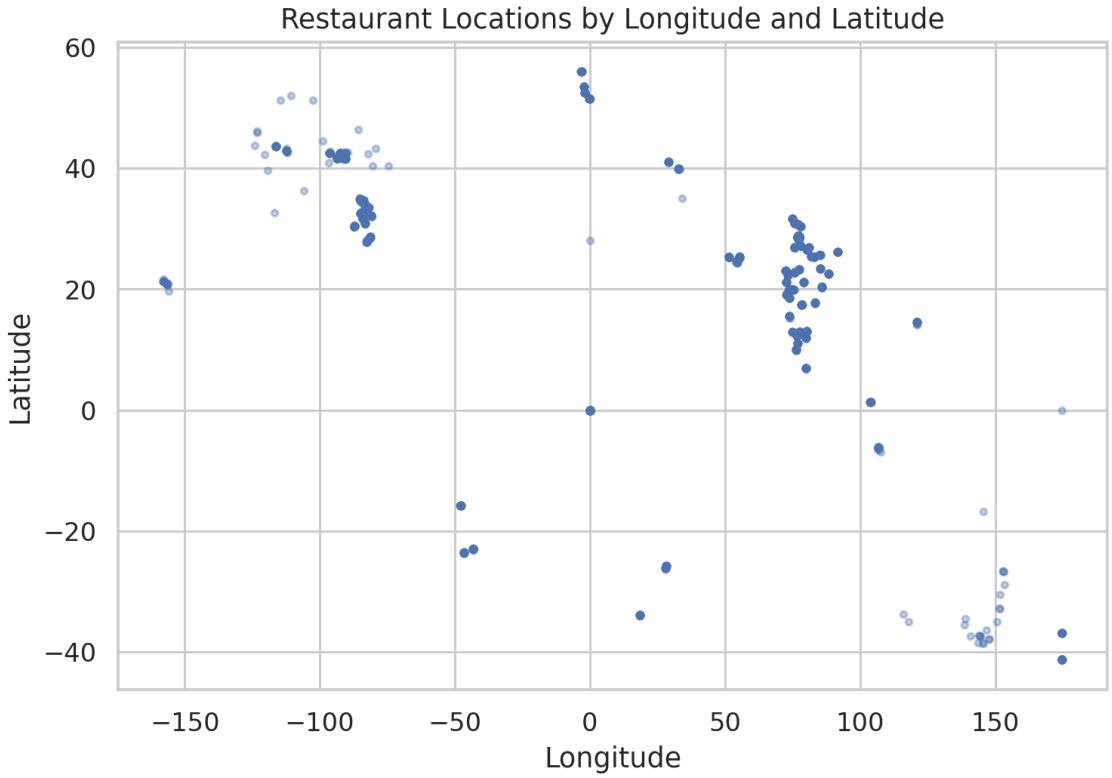


Common cuisine combination	Restaurant count
North Indian	936
Chinese, North Indian	616
Mughlai, North Indian	394
Fast Food	354
Chinese	354

Higher-rated cuisine combination	Average rating	Restaurant count
European, Mediterranean, North Indian	4.59	8
Burger	4.45	6
Modern Indian	4.35	11
Indian	4.25	18
International	4.23	6
Italian, Pizza, Sandwich	4.22	5

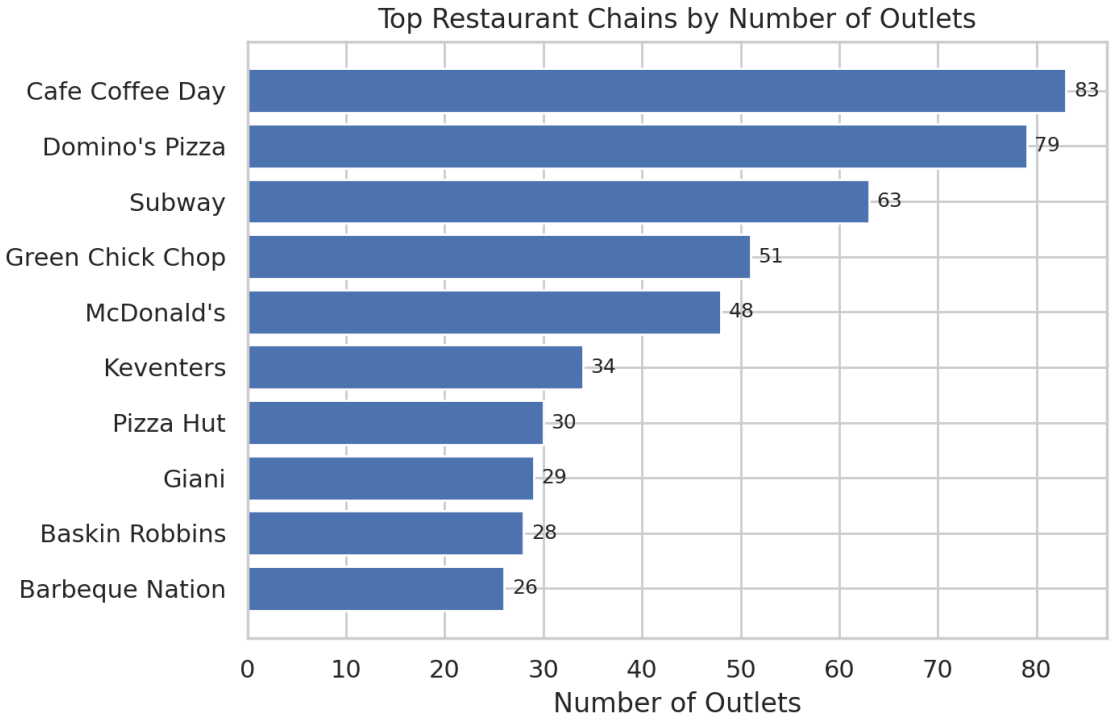
Tasks 7 and 8: Geographic Analysis and Restaurant Chains

The longitude and latitude plot shows a strong concentration of restaurants in a few dense urban zones rather than an even geographic spread. The dataset is heavily dominated by the Delhi NCR region, which explains the large clusters visible on the map-like scatter plot. At the locality level, areas such as Connaught Place, Rajouri Garden, Shahdara, and Defence Colony appear repeatedly and represent major restaurant hubs in the data.



Locality	Restaurant count
Connaught Place	122
Rajouri Garden	99
Shahdara	87
Defence Colony	86
Pitampura	85
Malviya Nagar	85
Mayur Vihar Phase 1	84
Rajinder Nagar	81

Restaurant chains were identified by repeated restaurant names. The largest chain presence in the dataset comes from Cafe Coffee Day, Domino's Pizza, and Subway by outlet count. However, high outlet count does not always correspond to the best ratings or the strongest engagement. Barbeque Nation stands out among the major chains with both a strong rating and very high average votes.



Restaurant chain	Outlets	Avg. rating	Avg. votes
Cafe Coffee Day	83	2.42	29
Domino's Pizza	79	2.74	84
Subway	63	2.91	97
Green Chick Chop	51	2.67	19
McDonald's	48	3.34	110
Keventers	34	2.87	37
Pizza Hut	30	3.32	165
Giani	29	2.69	29

Overall, the dataset shows strong dominance of North Indian and Chinese cuisine, a very large concentration of restaurants in New Delhi, a mostly low-to-mid price distribution, and better average ratings for restaurants that support online delivery. The analysis also confirms the presence of several large chains and clear geographic clustering in a few major urban localities.
